INTERNSHIP PROJECT SUBMISSION

Internship Completion Document

Student Name	RahulBariki
Roll No.	23X51A3302
Branch	Artificial Intelligence and Machine Learning
Section	CSE (AI & ML)
Submission Date	16 May 2026

1. Prototype Projects

The following prototype projects were developed during the internship period:

1.1 Group Prototype — ToolVerse

Project Type: Group Project

URL Link : https://toolversedaily.netlify.app/

Project Overview:

ToolVerse is an AI tool discovery and aggregation platform. It serves as a one-stop destination where every AI tool available in the market is listed and organized by category. Users can browse, discover, and explore AI tools without needing to search across multiple websites.

Key Features:

- Comprehensive listing of AI tools available in the market
- Category-based organization for easy navigation and discovery
- Centralized platform to explore all AI tools in one place
- Website-based interface for seamless user experience

1.2 Solo Prototype — Nexus Super App

Project Type: Individual / Solo Project

URL Link: https://nexus-super-app-nine.vercel.app/

Project Overview:

Nexus Super App is an all-in-one smart service platform designed to simplify everyday life by integrating multiple essential services into a single seamless ecosystem. The platform enables users to order food and groceries, book cabs or bike taxis, and access doorstep home services efficiently through a modern and intelligent digital experience.

Key Features:

Unified platform for food delivery, grocery shopping, transportation, and home services
• AI-powered recommendations for smarter service selection and personalized experiences
• Real-time order tracking and live service updates for enhanced convenience
• Secure payment gateway integration for safe and seamless transactions
• Smart booking system for cab, bike taxi, and doorstep service scheduling

2. Telegram Bots

The following Telegram bot was developed and deployed during the internship:

S.No.	Bot Name / Username	Description / Link	QR Code
1	**@BRahulOnline_bot**	Telegram bot developed during the internship as part of the automation and bot-building module. (https://t.me/BRahulOnline_bot)	

3. n8n Project Links

The following forms were created using n8n workflow automation during the internship:

S.No.	Form / Project Name	Description / Link
1	**ToolVerse AI Listing Form**	*n8n form for listing new AI tools on the ToolVerse website (https://toolversedaily.netlify.app/)*
2	**Job scrapping – Job Hunting**	*Scheduled daily at 9AM via cron trigger. Reads jobs from Linkedin and Naukari (https://tally.so/r/EkZdvr)*

4. Declaration

I hereby declare that all the projects, bots, and forms mentioned in this document were developed by me during the course of the internship. The information provided is true and accurate to the best of my knowledge.
